SUMMARY

AI Engineer with 2+ years building production LLM systems and autonomous AI agents. Shipped agentic pipelines that enabled 1,000+ job applications in a single quarter, and engineered prompt strategies that delivered a 12% uplift in task success within one week of deployment. Hands-on experience across the full GenAI stack: LLM integration, RAG pipelines, agentic orchestration, and scalable REST APIs, deployed on AWS Lambda and Docker in production environments.

EXPERIENCE

AI Engineer, Paul's Job GmbH

September 2023 - September 2025, Berlin, Germany

- Designed and deployed autonomous AI agents within a production chatbot using LangChain and OpenAI APIs, directly enabling users to apply for **1,000+ jobs** and trigger **1,400+ data collection processes** in a single quarter (Q1 2025)
- Engineered multi-step prompt strategies and agent tool-use workflows, delivering a **12% uplift** in successful job applications within one week of deployment
- Built an end-to-end topic modelling pipeline combining LLM-based inference with unsupervised embedding clustering on live chat data, refreshed weekly with daily inference giving HR clients real-time visibility into conversation trends
- Architected and shipped **5+ production REST APIs** using FastAPI, containerised with Docker and deployed on AWS Lambda; integrated into a high-traffic multi-tenant backend

Working Student and Bachelor's Candidate, Paul's Job GmbH (hyrd GmbH)

January 2023 - September 2023, Berlin, Germany

- Fine-tuned and benchmarked **5 multilingual transformer models** (BERT, XLM-R, JobGBERT) for experience-level classification from job advertisements, reaching F1-scores up to **0.87**
- Designed an ensemble Voting Classifier that outperformed the best single model by **4.6 percentage points**; results published as part of Bachelor's thesis and contributed to an active company research project

EDUCATION

Mechatronics B.Sc., Hamburg University of Applied Sciences

March 2018 - September 2023, Hamburg, Germany

- Thesis: *"Predicting Professional Experience Requirements from Job Advertisements using Multilingual Transformer based NLP Models"*

SKILLS

- **Programming Languages:** Python, JavaScript, SQL
- **AI & LLM:** LangChain, OpenAI API, Prompt Engineering, AI Agent Development, RAG Pipelines, Embeddings, LLM Evaluation, Transformer Models (BERT, XLM-R), Model Fine-tuning, Hugging Face
- **Backend:** FastAPI
- **Cloud & DevOps:** Docker, AWS Lambda, Git, CI/CD
- **Human Languages:** English (C1), German (C1), Indonesian (Native)
