SUMMARY

AI Engineer with 2+ years of experience developing backend systems and AI-driven applications using Python, FastAPI, and SQL. Skilled in agentic AI approaches, LangChain, and prompt engineering, with hands-on experience deploying LLM-powered features in production. .Proven ability to navigate the full development lifecycle, from rapid prototyping to deploying scalable production code in high-growth, multicultural environments.

EXPERIENCE

AI Software Engineer, Paul's Job GmbH

September 2023 - September 2025, Berlin, Germany

- Designed and deployed autonomous AI agents within a production chatbot, directly enabling users to apply for over 1,000 jobs and trigger 1,400+ data collection processes in a single quarter (Q1 2025)
- Engineered prompt strategies to optimize multi-step agent behavior and task execution, delivering a 12% uplift in successful job applications within the one week of deployment
- Built an end-to-end topic modelling pipeline combining LLM-based inference with unsupervised theme extraction from live chat data, refreshed weekly with daily inference, giving HR clients real-time visibility into user conversation trends
- Architected and implemented 5+ production-ready REST APIs using FastAPI to support scalable backend infrastructure

Working Student and Bachelor's Candidate, Paul's Job GmbH (hyrd GmbH)

January 2023 - September 2023, Berlin, Germany

- Fine-tuned and benchmarked 5 multilingual transformer models (BERT, XLM-R, JobGBERT) for experience-level classification from job ads, reaching F1-scores up to 0.87
- Designed and implemented an ensemble Voting Classifier that outperformed the best single model by 4.6 percentage points. The result was published as part of a Bachelor's thesis and contributed to an active company research project

EDUCATION

Mechatronics B.Sc., Hamburg University of Applied Sciences

March 2018 - September 2023, Hamburg, Germany

- GPA: 2.13

Academic Projects

- Bachelor Thesis: "Predicting Professional Experience Requirements from Job Advertisements using Multilingual Transformer based NLP Models"

SKILLS

- **Languages:** English (C1), German (C1), Indonesian (Native)
- **Programming Languages:** Python, JavaScript, SQL
- **Backend:** FastAPI
- **AI & ML:** Prompt Engineering, AI Agent Development, Model Training, LangChain
- **Cloud & DevOps:** Docker, AWS Lambda
- **Version Control:** Git
